

Project Title: I-Tech Electronics Store Management System

Project Description:

This project aims to develop a database system for I-Tech, a local electronics store that sells devices such as smartphones, laptops, and accessories. The system is designed to support the store's daily operations by organizing and managing its data efficiently.

The store imports products from different suppliers and uses a warehouse to store items and track inventory levels. The system will handle sales and purchase operations, allowing efficient management of products, suppliers, customers, and stock.
